Street Works 5 day course Supervisors & Operatives

The New Roads and Street Works Act (NRSWA) sets out the procedures and guidelines for personnel employed by local authorities, utilities companies and their contractors for the purpose of any road works in the highway or on footpaths.

Benefits of attending this course:

- A comprehensive understanding of the risks, and control measures to be applied around buried services in order to avoid direct contact with them.
- Better planning of work in the highway, to promote a safe system of work, install signing, lighting and guarding correctly, and to remove it in the correct sequence, once work has been completed.
- Gain a better understanding of different methods of excavation, and the tools and equipment used.
- Have an ability to carry out or supervise reinstatement of openings in the highway in accordance with current stipulated procedures.

The theoretical aspect of the course is delivered in the classroom, but there is an emphasis on a hands-on experience, using all appropriate tools and equipment under constant supervision. Assessment focuses on learners demonstrating their knowledge by practical assessments to agreed criteria, and by successful completion of multi choice question papers for each unit.

Units covered within the course:

Operatives

- LA - Location and Avoidance of Underground Apparatus
- O1 - Signing, Lighting and Guarding
- O2 - Excavation in the Highway
- O3 - Re-instatement and Compaction Backfill Materials
- O4 - Re-instatement of Sub-Base and Road base in Non-Bituminous Materials
- O6 - Re-instatement in Hot-lay Bituminous Materials
- O8 - Re-instatement of Modular surfaces and concrete Footways

Supervisors

- LA - Location and Avoidance of Underground Apparatus
- S1 - Monitoring Signing, Lighting and Guarding
- S2 - Monitoring Excavation in the Highway
- S3 - Monitoring Re-instatement and Compaction Backfill Materials
- S4 - Monitoring Re-instatement of Sub-Base and Road base in Non-Bituminous Materials
- S5 - Monitoring Re-instatement in Bituminous Materials
- S7 - Monitoring Re-instatement of Modular surfaces and concrete Footways

Duration: 5 days.
